TestRail <> Global App Testing Integration

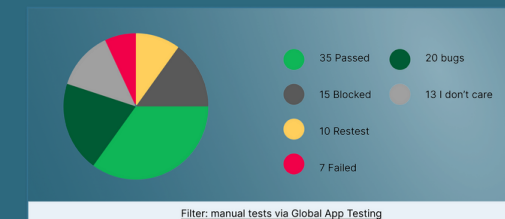

- + **TestRail** helps quality assurance (QA), engineering, and development teams speed up testing, improve product quality, and ship releases faster. More than 11,000 organizations like NASA, Apple, Microsoft, Activision Blizzard, and Amazon trust TestRail to power their QA and test management processes.
- + **Global App Testing** is an On-Demand crowdtesting solution that enables tech teams to test in over 189 countries with 70,000+ professional testers using real devices and environments. Hundreds of leading brands rely on Global App Testing's impact-first approach to quality, allowing Agile and DevOps teams to release faster and more often.
- + **The integration** between TestRail and Global App Testing acts as a single source of truth for all your testing requirements. Manage all your testing efforts in a central place and automatically import results from Global App Testing to TestRail so your entire team can keep track of your testing results in real-time with a powerful interface.
